

# ***PITBULLSA***

## **Ideal APBT body type.**

Since the genesis of the APBT breed a varied range of preferences as far as **body-type** or conformation goes **but all based on functional ability.**  
**Let me say it again – based on functionality and ability.**

My personally preference is for one which has good length, reasonable height, thick bones, deep chest and a head of medium to large size with decent muzzle length. This as opposite of the “Staffie” look.  
Some like the short, cubby, powerful muscular “Staffy type” and others prefer one of a more terrier-like build “types”

## **Atila's GR. CH. DENDY exemplifies this ideal – a real Bulldog (Pit Bulldog).**

GR. CH. Deddy – {Manjaro' Kennel has built a family of dogs on Gr Ch Dendy conformation}.

**“Form follows function, too much of one thing robs the dog of another”**
