Yeast treatment naturally.

Olive leaf extract, the probiotic, and a half teaspoon of the Caproyl.
Human and animal.

Importance of restoring and maintaining beneficial bacteria, the so-called "friendly flora" in the intestines.

These bacteria are killed off by **chlorine in your water supply, by Veterinary anti-biotics, by preservatives and by other factors.**

When the beneficial bacteria are gone, "bad" bacteria, moulds, and yeasts also known as **Candida** can then rage out-of-control.

Immune system overload, malnutrition, skin and ear problems, and many other problems shortly follow this.

Afflicted by candidiasis, the hidden curse.

Candiasis, an overgrowth of yeast (Candida) in the body, can be a key contributing factor in causing or worsening:

- * Food allergies reactions.
- * Digestive problems (causing as bad a symptoms as malabsorption syndrome).
- * Sensitivity to tobacco and other odors.
- * Other immune-related disorders, yeast skin infection and ear infections.
- * Depression.
- * Cancer.
- * Skin rashes, odour to skin, itching, red.
- * Joint and muscle pain.

The key to overcoming many such conditions **is to undo the actions which caused them to occur in the first place, while restoring balance to the body.**

Note! Just by thinking of supplementing organic/natural Yogurt, daily for a min of least 12 months **is still not enough.**

The gastrointestinal tract's balance of beneficial flora is most commonly disrupted by:

- * Antibiotic usage
- * Excessive sugar consumption (found in various commercial dog feeds)
- * Stress
- * Drinking chlorinated water
- * A diet consisting chiefly of heat processed tin or homemade foods
- * Prescription anti-inflammatory drugs
- * A rich diet "high" in fatty foods.

Many dogs lack sufficient friendly bacteria in their digestive tracts, and **are often overrun with unfriendly bacteria and yeasts at the same time.**

These dogs are in fact **being simultaneously poisoned and starved (malnourished).**

The effects of the imbalance of intestinal flora are all too often seen in the failing health and vitality of millions of adult and elderly individuals.

However, if your dog have had antibiotics, a high stress level, have been exposed to chlorinated water, or have any of the signs or symptoms of ill health below, the dog may have a bacterial imbalance beyond the ability of such foods to resolve.

If you or your dog have symptoms of any of the below conditions:

- * Chronic fatigue.
- * Frequent diarrhea.
- * Frequent intestinal gas.
- * Frequent constipation.
- * Poor immune response.
- * Chronic bladder infections.
- * Chronic vaginal infection.
- * Allergies to grass, pollen and foods etc.
- * Skin Issues.
- * Rapid onset of osteoporosis.
- * Vitamin B deficiencies.
- * Dairy product sensitivities.
- * Chronic bad breath.

Once again the gut flora needs to be repair and restored.

So to maintain a healthy and strong immune system.

There are now many very effective **pro biotic supplements** - commercial natural – herbs ... available from your vet or pet health stores.

A dog that has had any antibiotics any time in their life, will need to be taking these flora immune building supplements for a min of 6 months.

How to rid this yeast infection.

The fungal yeast is in the digestive tract stay for decades ... once the dog get too much yeast **it will not leave on its own.**

Not in a year, not in ten years, not in your lifetime.
And as long as it is there, it's going to win sooner or later.

So here is what you can do for your dog that has had or still has skin allergies, ear infections, and smelly odour or ever had antibiotics.

1. First, kill the yeast.

All this stuff is available at any health food store or on-line.

Olive leaf extract (herb) and Caproyl liquid (Caprylic acid) and give it for about two months.

Note! - Instead of using the **Caprylic acid capsules** buy it in liquid form which is best absorbed.

Each tablespoon releases 1600mg of "**caprylic acid**".

Caproyl liquid (Caprylic acid supplement).

Caprol, containing liquid caprylic acid (3600 mg per oz) and oleic acids, is a broad spectrum anti-fungal agent against Candida albicans and other fungi.

In this program, caprylic acid acquires its needed sustained-release properties from gel, formed by the mixture of Caprol, colon cleansers, and water.

This thick gel traps the caprylic acid and slows its transit through the colon.

Uncontrolled surges of caprylic acid into the liver are the most probable cause of adverse reactions to caprylic acid:

however, while in this gelled state, caprylic acid does not escape into the liver.

It is no surprise, then, that no adverse reactions to this gelled form of caprylic acid have been reported, even among human individuals who previously reacted to other caprylic acid products.

Traditional caprylic acid preparations exist as capsules and tablets, but the preference is the liquid form.

This mixing causes the caprylic acid to interact with the olive oil, thereby amplifying its fungicidal effects far beyond what caprylic acid has traditionally offered.

Also, the Caprylic acid in Caprol, **being a liquid**, has a coating action on the intestinal wall, which tablets and capsules cannot match.

As the liquid Caprol is dispersed in the **Psyllium/Bentonite gel**, it releases its caprylic acid throughout the entire length of the intestinal tract."

2. Second, you need to restore the friendly bacteria. Don't skimp on this part.

Be sure you get a really excellent **multi-strain probiotic for dogs**.

Note! - You'll want to keep giving or taking a good probiotic, ideally for the rest of your dog's and your own life.

That's because unlike 150 years ago, dogs rarely eat fermented foods.

As mentioned above, yeast and friendly bacteria compete for space.

Know this! -If your dog run low on friendly digestive enzymes and needed bacteria, the yeast can move back in.

3. Glutamine powder - The third thing is to patch the holes left by the yeast.

If you don't patch them, you'll end up with allergies, parasites running amok, and a whole lot more, all of it bad.

Here is where the **Glutamine powder will help which is an amino acid that aids in muscle repair and boosting the immune system and help to repair the intestinal lining.**

To do this, get yourself some Glutamine powder, mix a teaspoon in water or mix in your dog's yogurt.

Twice a day.

4. Digestive multi-enzyme.

The fourth thing you'll probably want is a good digestive multi-enzyme.

When yeast is overrunning the digestive system the “digestion” often gets stressed, and it needs some help.

Supplement digestive multi-enzyme with the meal time - it help to prevent bloating and discomfort.

Hydrosome tablets by Orthoplex - orthoplex.com.au - Very effective and help to increase low stomach acid.

Having “low” stomach acid **causes gastrointestinal issues, overgrowth of pathogens and malabsorption of minerals, vitamins and amino acids, protein and food sensitivities.**

Not to get confused with an acidic system that is often too acidic, this stomach acid in the gut is different to the rest of the body’s acidic levels.

Start with all the products at the same time.

They work better when taken together.

Suggested supplementation protocol - five supplements.

To assist your dog back to better health.

1. Caprylic Acid supplement – 1 tablespoon daily.

Use for 2 months.

2. Olive Leaf Extract (herb) capsule - 2 caps (powder from cap) or 40 drops daily

Use for 2 months.

3. A good multi strain probiotic supplement for dogs. (E.g. Powder Protexin soluble).

Give as directed on container.

Ongoing

4. Glutamine amino acid powder – 1 teaspoon twice daily.

Use for 2 months

5. A good multi stain digestive-Enzyme” (use powder from Cap or crush 1 tab).

**Before meals or add to every meat meal given for dogs.
Use for 2 months or longer if needed.**

Twice daily - mix in all powders to some plain good yogurt from health food or mix into some plain (tinned) sardines in spring water.
