Intestinal parasites.

The study of parasites is called parasitology

Ron Hines DVM PhD

Worming.

Worm your puppies on 2 weeks old and again on 4 and 6 weeks old with Antezole.

Worm your puppies 8, 12, 14 and 16 weeks with pyrantel pamoate. (Products that state on the label that they contain piperazine are not sufficient, human infant pinworm medicine is usually parantyl pamoate.)

Faecal specimens from very young puppies with worms are often negative when they are checked microscopically.

This is because veterinarians check for parasite eggs in the stool - not adult parasites.

The adult parasites ([hookworms & roundworms](#)) in puppies can take a number of weeks before they produce tell-tale eggs.
