6 pack

Revolution - Selamectin; Canex - Oxantel, Pyrantel, Praziquantel

Revolution - Administer the appropriate tube corresponding to the dog's body weight. One tube is designed to deliver a minimum of 6mg selamectin per kg body weight. Part the fur and apply topically to the skin in front of the shoulder blades. Apply monthly. Bathing or shampooing 2 or more hours after treatment will not affect the efficacy of Revolution. Pack sizes available include - Purple (2.6-5kg), Brown (5.1-10kg), Red (10.1-20kg), Teal (20.1-40kg). Dogs weighing more than 40kg - use an appropriate combination of available pack sizes.

Canex - Weigh dog and treat with 1 cube per 10kg of bodyweight, rounded up to the nearest half cube. Treat puppies at 2, 4, 8 and 12 weeks of age. Thereafter treat every 3 months, or 6-weekly in hydatid infested areas. Offer prior to feeding, included in food or dose by hand. Encourage chewing. Break into pieces for dogs that normally swallow treats whole. Fasting is not necessary prior to treatment.

Revolution - Contraindicated in dogs less than 6 weeks of age. Safe for use in animals infected with heartworm and may decrease circulating microfilariae but will not kill adult heartworm. Occasionally use has been associated with transient site reactions such as fur loss, coat colour change and itchiness.

Canex - Dogs should not be fed or allowed to feed on offal from any species. Dogs in hydatid areas should be treated every 6 weeks. This product on its own does not control heartworm.
